

About the Town

The Town of Gilbert has two separate sewer systems.

- The **sanitary sewer** collects wastewater from homes, business, and industrial sites from sinks, toilets, and other outlets. It goes through pipes to the wastewater treatment plant.
- The **storm sewer** collects rainwater runoff from the streets for flood control. This stormwater runoff **does NOT** go to a wastewater treatment facility before entering our recreational surface waters. It is transported by drains, streets, gutters, curbs, and open channels directly into retention basins, parks, washes, canals, and community lakes. That is why it is of utmost importance that we make sure there is;

Only Rain in the Storm Drain!

Stormwater Pollution Prevention: Pool & Spa

(For Owners & Contractors)

www.GilbertAZ.gov/Stormwater

Best Management Practices for Pool & Spa Maintenance:

Everyday Maintenance:

- Store pool chemicals in covered containers with no leaks. Store in a well ventilated, dry area, out of direct sunlight.
- Dispose of leaves and other materials properly, do not put them where they may wash into the storm system.
- Do not overfill pool; allow room for rainfall.
- Do not discharge backwash water into the street or gutter. It should go into the sanitary sewer cleanout.
- Recycle your unused chemicals if necessary at the Household Hazardous Waste Collection

www.GilbertAZ.gov/HHW

Filter Maintenance & Replacement:

- When replacing the filter, sand, diatomaceous earth, etc., follow the disposal requirements for each specific material.
- Do not clean or rinse filter cartridges into the street or gutter.

Best Management Practices for Pool Draining:

Follow one of these three options (in order of preference):

1. Drain all or a portion of the pool water onto your personal property.
2. Drain the water into your sanitary sewer cleanout. (Usually in front of your house).
3. Ensure the chemical level is as low as possible and drain into the street. This is your last option and only available if; it is allowed by your HOA CC&R's, your street is not subject to flooding, you do not live in a lake community, you do not have a salt water pool, and do not have a green pool.

Unable to locate sanitary sewer cleanout?
Call 811 for assistance or visit:

www.call811.com

Sanitary sewer clean-outs are usually located in the front of your house and will look similar to the photos above. You will have one or two sewer connections. Be aware, they are sometimes hidden by landscaping.

Best Management Practices for Pool & Spa Construction:

Be sure your contractor knows and follows these practices before starting construction or renovation.

Manage Sediment Pollution from Excavation by:

- Avoid excavation during wet weather.
- Remove excavating materials as soon as possible; cover piles in the mean time to prevent sediment erosion.
- Prevent track-out and clean up if it occurs.
- Dispose of materials properly, nothing should be washed into the street or gutter.
